Document Number & Title DOE-RL, Rev. 1, "Remedial Investigation Feasibility study Work Plan for the 200-BP-1 Operable Unit Hanford Site Richland, WA"		Date Document Last Issued March 1990
Originator M. A. Buckmaster 200-BP-1 RI Coordinator		Phone 6-1792
<p>Description of Change</p> <p>Add the following after the 2nd sentence of the 1st full paragraph on WP-163 and after the 2nd sentence of the 2nd full paragraph on SAP/FSP-43: Ruthenium -106 will initially be sampled for in wells 299-E33-1, 3, 4, 5, 7, 13, 24, 26, 38, 699-50-53A, 55A. Based on the initial data, Ruthenium-106 would be eliminated from the parameters of interest table for groundwater sampling for the remaining sampling periods.</p> <p><i>reevaluated as a</i></p> <div data-bbox="889 835 1218 1160"></div> <p>Note: Include affected page number</p>		
<p>Justification and Impacts of Change</p> <p>Due to the short half-life of Ruthenium-106 and length of time the cribs last received effluent, Ruthenium-106 is not expected to be present. <i>Previous analysis from existing wells suggests that Ruthenium-106 concentrations have not exceeded the detection limit of 172 pCi/L in recent years. Analysis are required to determine if Ruthenium-106 concentrations exceed the Maximum Concentration Limit of 30 pCi/L.</i></p>
